To our customers

Response letter for: Conflict Materials (incl. Dodd-Frank Act section 1502)

SST Sensing strive to comply with the Dodd-Frank Act Section 1502 relating to the prevention of human rights violations and environmental damage in regions afflicted by conflict, particularly in the Democratic Republic of Congo and its neighbouring countries. We would like to make a contribution to this act by discounting the trading of such minerals (gold, tantalum, tungsten, cobalt, and tin) which have been mined under the influence of illegal armed groups.

As a responsible manufacturer and distributor of products containing electronic components, SST Sensing works closely with its suppliers, where efforts are commercially viable, towards complying with this act and only use raw materials from environmentally and socially responsible sources.

Indeed some of our suppliers are assisting in this compliance as they have already initiated such processes in making clear and transparent statements on this subject. SST Sensing see ourselves not in a position to issues such confirmations or signed statements, as only the manufacturers themselves can ensure this, but we can refer our customers to the statements about the Conflict Minerals on our manufactures' websites. Below are website links for some of the key suppliers of electronic raw material components used in the manufacture of SST Sensing products.
